

### Oxymorphone (342,076)

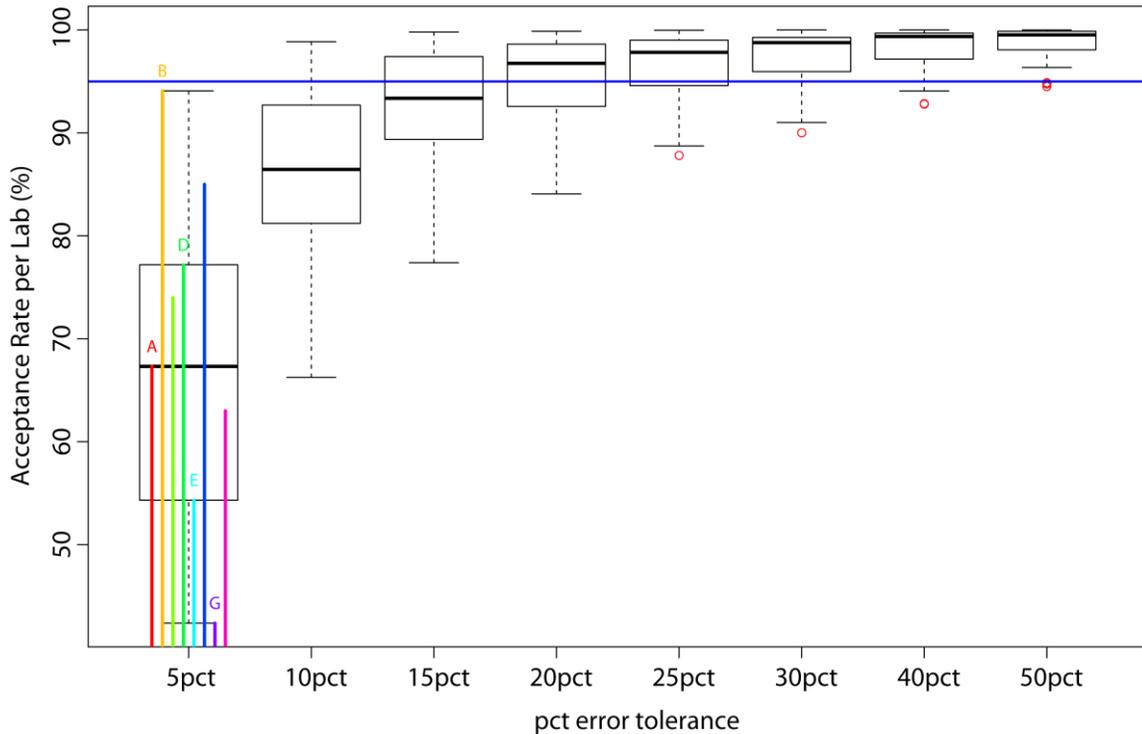

Figure 3 : ION-R variance for the 342,076 positive observations of oxymorphone, displayed as the distribution of ION-R acceptance rates/lab at various error tolerances. The error tolerances were applied around the mean ION-R of each batch. The colored vertical bars at the  $\pm 5\%$  tolerance demonstrate how 8 imaginary labs from this distribution would appear if plotted individually.
