Program Information

Toxicological Testing in the Clinical Lab: Balancing Current Needs, Clinical Expectations and Reality is the sixth of 12 programs in AACC's "Cutting Edge Technologies, Common Sense Solutions" webinar series. Attend this webinar and learn how one lab manages requests for tests to detect the use of emerging synthetic drugs, such as "bath salts" and "incense," as well as strategies your toxicology lab can use to meet your organization's clinical needs for testing poisoned patients and patients who are suspecting of using or abusing drugs.
