Tuesday, September 10, 2013

11:00am PT - 12:00pm PT

**Using cTn to Assess Chest Pain Patients:
The Accuracy versus Turnaround Time Debate**

Kent Lewandrowski, MD

Pathologist, Associate Chief for Laboratory and Molecular Medicine, Massachusetts General Hospital, and Professor of Pathology, Harvard Medical School, Boston, MA

Alan H.B. Wu, PhD

Chief of Clinical Chemistry and Toxicology, San Francisco General Hospital; Professor of Laboratory Medicine, University of California, San Francisco, CA

**Location: USCD Center for Advanced Laboratory Medicine
UC San Diego, 10300 Campus Point Drive, San Diego, CA 92121
Conference Room C, on the NE side of the building;
First parking lot on the right as you enter the complex**

Approved for 1 ACCENT Continuing Education Credit

Program Information

Using cTn to Assess Chest Pain Patients: The Accuracy vs. Turnaround Time Debate is the ninth of 12 programs in AACC's "Cutting Edge Technologies, Common Sense Solutions" webinar series. **RESOLVED:** In the assessment of chest pain patients, accuracy is more important than speed. Or is it? During this webinar, a cardiac biomarker expert and a POCT director square off to debate the pros and cons of using POCT vs. central laboratory testing for cTn in determining whether an emergent chest pain patient is having or has had a heart attack.
