

Sponsored Webinar San Diego Section, AACC

FREE to members and their guests

**Tuesday, October 8, 2013**

**11:00am PT - 12:00pm PT**

**Multiplex Nucleic Acid Tests for Respiratory Viruses: Technology,  
Applications, and Clinical Relevance**

***Frederick S. Nolte, PhD***

Professor, Director of Clinical Laboratories, and Director of Molecular Pathology, Department of Pathology & Laboratory Medicine, Medical University of South Carolina, Charleston, SC

**Location: USCD Center for Advanced Laboratory Medicine  
UC San Diego, 10300 Campus Point Drive, San Diego, CA 92121  
Conference Room C, on the NE side of the building;  
First parking lot on the right as you enter the complex**

Approved for 1 ACCENT Continuing Education Credit

**Program Information**

Within the last five years, a plethora of multiplex nucleic acid testing platforms have emerged, offering labs a wide variety of technologies to choose from when performing respiratory virus testing. These new technologies provide opportunities to detect respiratory viruses more quickly and accurately than ever before, and are having an impact on clinical practice. It is important, though, to match the appropriate technology with the testing needs of clinicians, and laboratorians must understand the advantages and limitations of these new platforms to provide input on how best to use them.
