11:00am PT - 12:00pm PT

Understanding the Role of Biomarkers in the Sepsis Diagnosis Algorithm

Alison Woodworth, PhD

Assistant Professor of Pathology, Microbiology and Immunology,
Vanderbilt University Medical Center, Nashville, TN

Jessica Colon-Franco, PhD

Department of Pathology, Microbiology and Immunology,
Vanderbilt University Medical Center, Nashville, TN

**Location: USCD Center for Advanced Laboratory Medicine
UC San Diego, 10300 Campus Point Drive, San Diego, CA 92121
Conference Room C, on the NE side of the building;
First parking lot on the right as you enter the complex**

Approved for 1 ACCENT Continuing Education Credit

Program Information

Last year, U.S. hospitals treated more than a half million cases of sepsis, a syndrome characterized by a systemic inflammatory response to infection that can rapidly lead to organ failure and death. In an effort to help reduce sepsis-related mortality rates, some healthcare organizations are asking their laboratories to help physicians and nurses recognize patients with sepsis at an early stage. In addition to reducing morbidity and mortality, early diagnosis of this often deadly condition can also help reduce downstream complications and costs for both patients and healthcare organizations.
